Problem Statement

In residential and commercial buildings, bathroom ventilation fans play a crucial role in maintaining indoor air quality and preventing moisture-related issues. However, traditional on/off switches for these fans lack efficiency and automation, leading to potential problems such as energy wastage and inadequate ventilation. To address these challenges, there is a need for an intelligent Bathroom Ventilation Fan Controller that offers automated control, energy efficiency, and improved indoor air quality. The controller should integrate sensors and smart algorithms to detect occupancy and humidity levels, automatically adjusting fan operation to optimize ventilation while minimizing energy consumption.
